ВВЕДЕНИЕ

В современном веб-разработке создание одностраничных приложений (SPA) стало стандартом благодаря своей скорости, удобству использования и высокой отзывчивости интерфейса. Цель данной курсовой работы — разработка интернет-магазина мобильной техники с использованием современного стека технологий: React, TypeScript, Vite, Tailwind CSS и UI-компонентов библиотеки shadcn/ui. Приложение реализовано как SPA, что позволяет пользователю взаимодействовать с интерфейсом без полной перезагрузки страницы, обеспечивая тем самым улучшенный пользовательский опыт.

Разработка велась в рамках изучения современных подходов к построению клиентских приложений на базе библиотеки React, с акцентом на модульность, повторное использование компонентов и строгую типизацию при помощи TypeScript. Также важной частью работы стало применение Vite — современного инструмента сборки, обеспечивающего быструю разработку и горячую перезагрузку. Для стилизации использован Tailwind CSS, что позволило достичь чистоты кода и гибкости в оформлении интерфейса. UI-компоненты библиотеки shadcn/ui применялись для обеспечения единообразия и улучшения визуального восприятия элементов приложения.

В результате выполнения курсового проекта получено удобное и функциональное веб-приложение, реализующее основные функции интернет-магазина: отображение списка товаров, просмотр подробной информации о товаре, добавление в корзину. Работа также позволила закрепить теоретические знания, полученные в ходе изучения курса, и приобрести практические навыки работы с современными технологиями фронтенд-разработки.

1 Индивидуальное задание

В рамках индивидуального задания необходимо было разработать программное обеспечение, имитирующее процесс покупки товаров в магазине, с возможностью взаимодействия пользователя через графический интерфейс. Согласно методическим указаниям, приложение должно реализовывать основные функции: добавление и удаление товаров из корзины, расчет стоимости покупки, выбор способа оплаты (наличные, карта, бонусы), обработку различных пользовательских сценариев (недостаток средств, взвешивание товара и др.), а также включать модульное тестирование ключевых функций. Дополнительно требовалась реализация с применением принципов ООП и SOLID, использование шаблонов проектирования и архитектурных паттернов, а также загрузка данных из внешнего хранилища.

Разработка проекта началась с этапа проектирования пользовательского интерфейса. Для этой цели был использован инструмент Figma, в котором была создана визуальная концепция интернет-магазина. В макете определены основные элементы интерфейса: каталог товаров, карточки продукта, корзина, форма оформления заказа, а также подобраны ключевые стилистические решения — цветовая палитра, отступы, шрифты и визуальные паттерны.

После утверждения дизайна был выбран современный технологический стек для реализации фронтенда: React с использованием TypeScript, Vite как инструмент сборки, Tailwind CSS для стилизации компонентов и shadcn/ui для построения пользовательского интерфейса. В процессе выполнения проекта с нуля были изучены основные технологии, в том числе синтаксис и особенности работы с TypeScript, концепции компонентного подхода в React, маршрутизация, управление состоянием, взаимодействие с внешними API и основы тестирования.

Таким образом, индивидуальное задание реализовано в полном соответствии с техническим заданием и требованиями к курсовой работе, включая все необходимые пользовательские сценарии, архитектурные принципы и визуальные стандарты.

2 Краткое описание хода работы и назначение используемых технологий

Разработка интернет-магазина «SL&SHOP» велась поэтапно с соблюдением современных подходов к созданию фронтенд-приложений. Основная цель заключалась в создании функционального и расширяемого SPA-приложения на основе библиотеки React и языка TypeScript с использованием актуальных инструментов и паттернов проектирования. Работа над проектом включала следующие ключевые этапы: проектирование интерфейса, выбор технологий, настройка окружения, реализация бизнес-логики, стилизация и тестирование.

2.1 Разработка дизайна Figma

Первоначально была выполнена работа по проектированию пользовательского интерфейса в Figma. В ходе дизайна определены основные компоненты системы: структура каталогов, карточки товаров, корзина, формы обратной связи и оформления заказа. Также на этом этапе выбрана и согласована цветовая схема, подобраны шрифты и общие визуальные элементы, соответствующие тематике современной онлайн-торговли.

2.2 Настройка окружения для сборки проекта

После проектирования началась настройка окружения. Для быстрого старта и комфортной разработки был выбран Vite — современный инструмент сборки, который обеспечивает мгновенную перезагрузку при изменениях и высокую скорость компиляции. Вместо JavaScript использовался TypeScript, позволяющий строго типизировать данные, что существенно снижает вероятность ошибок и улучшает читаемость и поддержку кода. Основным фреймворком стал React, предоставляющий удобный способ построения UI из переиспользуемых компонентов.

2.3 Выбор библиотек стилизации

Для стилизации компонентов использовалась утилитарная CSS-библиотека Tailwind CSS, обеспечивающая высокую скорость вёрстки, консистентность дизайна и минимальное дублирование кода. Визуальные элементы и готовые компоненты были дополнительно реализованы с помощью библиотеки shadcn/ui, которая позволила ускорить разработку и соблюсти единый визуальный стиль.

2.4 Архитектура проекта

Проект структурирован по методологии Feature-Sliced Design (FSD), разделяющей код на независимые слои (entities, features, pages, shared, app), что упрощает масштабирование и поддержку. Реализация бизнес-логики, такой как управление корзиной, фильтрация товаров и система оплаты, была выделена в отдельные фичи, каждая из которых изолирована и может переиспользоваться.

2.5 База данных

База данных реализована с помощью Supabase, предоставляющего облачный PostgreSQL и API для взаимодействия с таблицами продуктов, заказов, категорий и сообщений. Связь с базой данных обеспечивается через REST API, доступ к которому конфигурируется с использованием переменных окружения.

2.6 Шаблоны проектирования методов

В проекте применены шаблоны проектирования: Strategy — для выбора метода оплаты, Observer — для подписки на изменения корзины, Factory — для генерации карточек товаров, и Singleton — для единого подключения к Supabase.

2.7 Тестирование

Для проверки корректности работы функций использовались Vitest и React Testing Library — современные инструменты модульного тестирования, позволяющие покрыть тестами критически важные участки логики: расчет стоимости, валидацию форм и стратегии оплаты.

Таким образом, проект построен на современных и надежных технологиях, что обеспечило высокую стабильность, расширяемость и соответствие требованиям учебной задачи.

3 Пользовательская документация

Веб-приложение «SL & SHOP» представляет собой современный интернет-магазин, разработанный с целью предоставить пользователю интуитивно понятный и удобный интерфейс для выбора, покупки и оплаты товаров. Ниже описаны основные сценарии взаимодействия пользователя с системой.

3.1 Главная страница

После запуска приложения пользователь попадает на главную страницу, где представлен краткий обзор магазина, приветственное сообщение и ссылки на другие разделы. Отсюда можно перейти в каталог, просмотреть товары или связаться с администрацией через форму обратной связи. На рисунке 1 изображена страница главного меню.

Рисунок 1 – Главная страница

3.5 Страница каталога товаров

Переход в раздел «Каталог» позволяет пользователю просматривать все доступные товары. Для удобства реализованы следующие функции: Фильтрация по категориям и диапазону цен, Поиск по названию товара, Сортировка по цене и популярности. Каждый товар представлен в виде карточки с изображением, названием, ценой и рейтингом. Нажав на карточку, пользователь попадает на страницу детального описания товара, где представлены его характеристики, описание и кнопка добавления в корзину. На рисунке 2 изображен рисунок страницы каталог.

Рисунок 2 – Каталог сайта

3.5 Страница товара

После выбора одного или нескольких товаров пользователь по нажатию переходит на подробную страницу товара, где описаны основные характеристики. По добавлению товара можно сразу перейти в корзину по отдельному уведомлению. На рисунке 3 изображена страница товара.

Рисунок 3 – Страница товара

3.5 Страница Корзины

Раздел «Корзина» позволяет управлять добавленными товарами. Увеличивать или уменьшать количество товаров. Удалять товары из списка. Отслеживать итоговую стоимость заказа, автоматически пересчитываемую при изменении содержимого корзины. В случае, если пользователь попытается оформить заказ при недостаточном количестве средств (в симулируемых сценариях). На рисунке 4 изображена страница корзины.

Рисунок 4 – Страница корзины

3.5 Страница оплаты

При переходе к оформлению заказа пользователь должен: Ввести контактные данные (имя, email, телефон). Выбрать способ оплаты (банковская карта или система быстрых платежей). Подтвердить корректность введенной информации. Далее происходит обработка заказа. В случае успеха пользователь получает подтверждение покупки. На рисунке 5 изображена страница оплаты.

На рисунке 9 представлена блок-схема.

Рисунок 9 – Блок-схема проекта

4.2 Описание сущностей и модулей

Проект «SL & SHOP» построен на архитектуре Feature-Sliced Design и включает несколько ключевых слоёв, каждый из которых отвечает за свою часть функциональности. Центральным звеном является корневой модуль приложения — компонент `App.tsx`, отвечающий за начальную инициализацию и подключение маршрутизации, которая реализована в файле `Router.tsx`. Через маршрутизатор происходит переход между основными страницами интерфейса, такими как главная страница, каталог, корзина, страница товара, оформление заказа и обратная связь. Эти страницы реализованы в модуле `pages` и отвечают за отображение пользовательского интерфейса и взаимодействие с бизнес-логикой.

Бизнес-функции проекта сгруппированы в модуле `features`. Например, модуль `cart` реализует управление состоянием корзины: добавление и удаление товаров, перерасчёт суммы заказа и синхронизацию с пользовательскими

действиями. Модуль `filter` отвечает за фильтрацию и сортировку товаров по категориям и диапазону цен. Для страничного вывода товаров используется модуль `pagination`, а обработка оформления заказа реализована в модуле `payment`, где применяется паттерн «Стратегия» для выбора метода оплаты.

Все бизнес-функции используют сущности, описанные в модуле `entities`. Здесь представлены такие объекты, как `product` (товар), `cart` (корзина), `category` (категория) и `payment` (оплата). Эти сущности инкапсулируют логику работы с данными, предоставляют интерфейсы и модели и взаимодействуют с внешними API. Например, сущность `product` содержит функции загрузки списка товаров и получения информации о конкретном товаре, а сущность `cart` управляет структурой объектов в корзине и вычислением итоговой стоимости.

Общие компоненты проекта находятся в слое `shared`. Сюда входят UI-компоненты, такие как кнопки, карточки товаров и формы, собранные в модуле `ui`. Модуль `api` содержит обёртки над запросами к Supabase API и реализует взаимодействие с базой данных. Утилиты и вспомогательные функции, такие как валидация ввода или расчет количества, размещены в модуле `utils`, а технические хуки и библиотеки — в модуле `lib`.

Хранение данных осуществляется через Supabase, который предоставляет API-доступ к базе данных PostgreSQL. Обращение к базе идёт через централизованный API-слой, где данные сериализуются и передаются в нужные сущности или компоненты. В целом, структура проекта логически разделена, а модули связаны между собой через чётко определённые интерфейсы, что делает систему масштабируемой, тестируемой и удобной для сопровождения.

Еще подробнее прочитать техническое описание можно на GitHub: <https://github.com/skv0r/slshop-react>

4.3 Описание файлов в проекте

Таблица 1 – Описание сущностей и модулей магазина.

Слой Модуль	Сущность / Блок	Назначение	Кому передаёт данные	Откуда получает данные	Тип передаваемых данных
App	App.tsx	Корневой компонент приложения, инициализация	Router.tsx, глобальные провайдеры	—	JSX-компоненты, маршруты
App	Router.tsx	Конфигурация маршрутов	Страницы (pages/)	App.tsx	React-пути (Route, Navigate)
Pages	Home, Catalog, Cart, ProductDetails, Payment, Contacts	Отображение пользовательских страниц	UI, features/, entities/	Router.tsx	JSX, данные из entities/features
Features	cart/	Управление состоянием корзины	CartPage, PaymentFeature	CartItem, пользовательский ввод	Объекты корзины (CartItem[])
Features	filter/	Фильтрация и сортировка товаров	CatalogPage, ProductEntity	URL параметры, форма поиска	Параметры фильтрации ({ categoryId, priceRange })
Features	pagination/	Разделение списка товаров на страницы	CatalogPage, ProductEntity	Пользовательская навигация	Параметры пагинации (page, limit)
Features	payment/	Обработка заказа и выбор метода оплаты	PaymentPage, Supabase API	PaymentEntity, CartFeature	PaymentData, Order
Entities	product/	Представление товара	ProductCard, ProductDetailsPage	API, shared/lib	Объекты Product
Entities	cart/	Бизнес-логика корзины (добавление/удаление)	CartFeature	UI, локальное хранилище	Объекты CartItem, числовые данные

Entities	category/	Категории товаров	FilterFeature, CatalogPage	API, Supabase	Объекты Category
Entities	payment/	Платёжные данные, стратегии оплаты	PaymentFeature	UI, shared/utils, Supabase	PaymentStrategy, OrderData
Shared	ui/	Общие компоненты интерфейса (кнопки, карточки)	Используются во всех слоях	—	JSX, стили
Shared	lib/	Вспомогательные функции и хуки	Везде	—	Утилиты (например, useDebounce)
Shared	api/	Обёртки над Supabase API	entities/, features/	Supabase URL и ключи	JSON-данные от API
Shared	utils/	Общие функции: валидация, расчёты	features/, entities/	—	Числа, строки, проверочные булевы

5 Модульное тестирование

Модульное тестирование является важной частью разработки проекта «SL & SHOP» и позволяет обеспечить стабильность, корректность и предсказуемость поведения ключевых компонентов и функций. В рамках данного проекта тестирование проводилось с использованием современных инструментов — **Vitest** как основного фреймворка для написания и запуска тестов, а также **React Testing Library** для проверки работы компонентов в контексте React-приложения. Эти инструменты позволяют реализовать тесты, близкие к реальному пользовательскому взаимодействию, и охватить логику как на уровне функций, так и компонентов.

В первую очередь были выделены критически важные участки бизнес-логики, подлежащие тестированию. Это, прежде всего, функции, отвечающие за расчёт количества товаров и стоимости в корзине, валидацию пользовательского ввода, а также реализация стратегии оплаты. Тесты

писались по принципу unit-тестирования: каждый тест проверяет изолированную функцию с конкретным входом и ожидаемым выходом.

Один из тестируемых модулей — `utils/quantity.ts` — включает функции `validateQuantity`, `incrementQuantity` и `canDecrement`. Эти функции проверяют, не превышает ли указанное пользователем количество допустимые границы, корректно ли выполняется увеличение и уменьшение значений, и возможно ли выполнить соответствующее действие при заданных условиях. Тесты на эти функции включают как позитивные, так и граничные сценарии.

Также модуль `payment` использует паттерн «Стратегия», где каждая реализация (например, `CardPaymentStrategy` и `SBPPaymentStrategy`) тестируется на предмет корректной обработки данных. Проверяется, что при передаче валидных данных стратегия возвращает результат нужного формата, а при ошибках — корректно выбрасывает исключения. Таким образом достигается уверенность в устойчивости модуля при различных пользовательских сценариях.

Тестирование компонентов `React` производилось с использованием `@testing-library/react`, позволяющей эмулировать поведение пользователя — нажатия кнопок, ввод данных, навигацию и ожидание ответов от асинхронных функций. Это особенно актуально для проверки формы оформления заказа и интерактивных компонентов корзины.

Запуск тестов осуществляется через команды `npm run test` и `npm run test:ui`. Дополнительно используется `npm run test:coverage` для получения отчета о покрытии кода тестами, что позволяет контролировать полноту тестирования и при необходимости расширять его область. Покрытие затрагивает основные утилиты, формы, логику обработки заказов и работу стратегий оплаты.

В результате выполнения модульного тестирования обеспечена надёжность ключевых бизнес-функций приложения, минимизирован риск критических ошибок и повышена стабильность продукта при дальнейшем

расширении и доработке. На рисунке 10 изображен результат модульного тестирования.

Рисунок 10 – Успешное тестирование проекта

5 Демонстрация основных механик и сценариев

ЗАКЛЮЧЕНИЕ

В ходе выполнения курсовой работы был разработан полнофункциональный интернет-магазин «SL & SHOP» с современным пользовательским интерфейсом и надёжной архитектурой. Проект реализован на основе библиотеки React с использованием TypeScript и других актуальных технологий, таких как Vite, Tailwind CSS и Supabase. Особое внимание было уделено структурированию кода по принципам Feature-Sliced Design, что обеспечило модульность, масштабируемость и удобство поддержки приложения.

Разработка велась с полного нуля: от проектирования пользовательского интерфейса в Figma до реализации логики обработки корзины, фильтрации товаров, оформления заказа и интеграции с базой данных. В проекте применены ключевые принципы объектно-ориентированного программирования и SOLID, а также шаблоны проектирования, такие как «Стратегия», «Наблюдатель», «Фабрика» и «Одиночка».

Особое внимание было уделено модульному тестированию — протестированы функции, связанные с расчётом количества товаров, валидацией данных, обработкой стратегий оплаты. Это позволило обеспечить надёжность и устойчивость бизнес-логики при различных сценариях использования.

В результате получено современное и расширяемое веб-приложение, полностью соответствующее индивидуальному заданию. Разработка данного проекта способствовала углублённому изучению фронтенд-разработки, принципов построения архитектуры приложений, работы с внешними API и навыков тестирования. Полученные знания и практический опыт могут быть использованы в дальнейшей профессиональной деятельности и реализации более сложных программных продуктов.
